### A Problem Solved

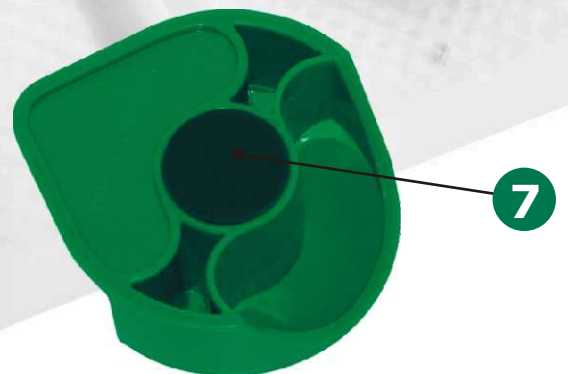

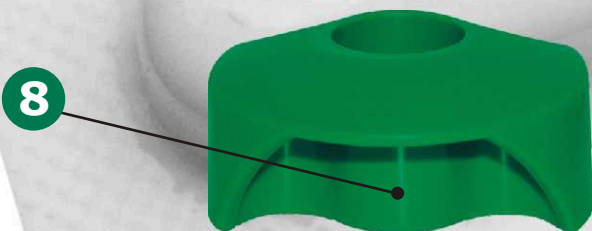

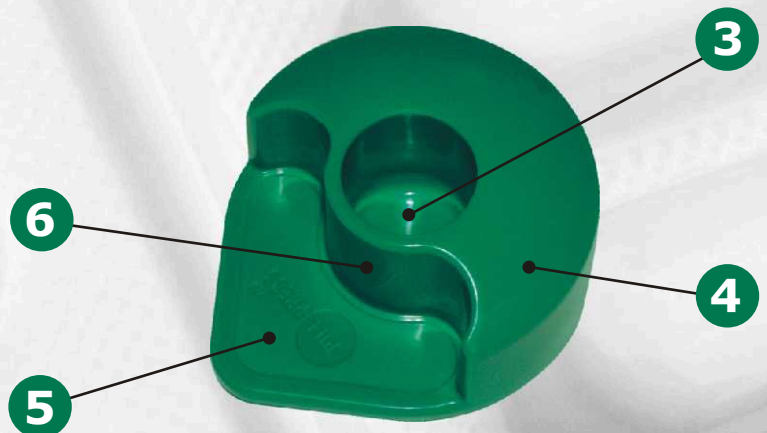

PillPress® has been designed to help you remove pills and tablets from foil blister packaging.

A large percentage of the population suffers with Arthritis and other forms of muscular weakness in their hands and finger joints. This condition makes opening packets of pills very difficult.

Anyone with Stroke Paralysis or a Visual Impairment can also find handling small pills a problem.

Over 90% of all pills sold over the counter and by prescription are now dispensed in Foil Blister Packs.

PillPress® is a unique and innovative product that solves this frustrating problem.

**The easy way to remove pills from packaging**

## Easy to use

Place your pack of pills on the PillPress® with the foil side of the pack facing downwards.

Ensure the selected pill is located directly over the well and press down firmly with either your thumb or finger.

Press the pill through the foil until it drops into the well of the PillPress®.

**PillPress has been Ergonomically Designed and Clinically Tested**

## Retail Packaging

Standard Retail Packaging or Private Label options are available on request.

Standard Retail Blister Pack 200 x 110mm. 4 colour print both sides and a Euro Slot to offer Wall Hook or Clip Strip display options.

Blister is not heat sealed, enabling all packaging to be fully recycled.

## A useful Corporate Gift

PillPress® can be produced in any colour and branded with a company logo
